## Backend Developer

### Objective:

---

I am an enthusiastic and committed back-end web developer with a passion for learning and applying new knowledge to real projects. I have development qualifications in HTML, CSS, JavaScript, ES6, Bootstrap, , Php, MySQL, and Laravel. I am committed to providing the highest level of hard work, sharing knowledge, and collaborating frequently with others to create new and improved products. I am excited about the opportunity to continue learning and gaining more experience as a Software Engineer while contributing to the development of interactive and user-friendly websites.

### Education:

---

Faculty of Computers and Information, Kafr El-Sheikh University.

### Skills:

---

- |              |              |               |
|--------------|--------------|---------------|
| • HTML       | • Ajax, Json | • MySQL       |
| • CSS        | • Rest API's | • Laravel     |
| • JavaScript | • Bootstrap  | • Git, Github |
| • ES6        | • PHP        |               |

### Job:

---

- Backend Developer at Wego Station Company Since 4/11/2023

### Projects:

---

- **Maths-House**
  - Built a web platform that enables students to access lessons, practice materials, and take online exams.
  - Designed a user-friendly interface using **HTML, CSS, JavaScript, and Bootstrap**, and implemented backend functionality with **Laravel**.
  - Applied best practices in coding, responsive design, and user experience.
  - **GitHub:** [github.com/AhmedYahia73/Math-House](https://github.com/AhmedYahia73/Math-House)
- **ElManhaq**
  - designed and developed a web application that facilitates communication between teachers and students, supporting course sharing and interaction.
  - Utilized **React.js** for a dynamic frontend, styled with **HTML, CSS, JavaScript, and Bootstrap**, and built the backend using **Laravel**.
  - Focused on responsive design and real-time collaboration features.

- **GitHub:** [github.com/AhmedYahia73/Elmanhag](https://github.com/AhmedYahia73/Elmanhag)

- **Food2go**

- Designed and developed a mobile application to help restaurants efficiently receive orders from customers and manage deliveries through the app. Technologies used (html, css, javascript, Bootstrap, React JS, Laravel).
- GitHub: <https://github.com/AhmedYahia73/food2go>

- **Wego Store**

- Developed a full-featured e-commerce website for selling domains and offering website-related services, including hosting, site management, and custom development.  
GitHub: <https://github.com/Ziad-Alsaghier/wegostore>

- **Travelta**

- Developed a comprehensive booking management system tailored for a tourism company to streamline the reservation process for tours, accommodations, and travel services..  
GitHub: <https://github.com/Marwan-afk4/travelta>

- **Ticket Hub**

- Built a web-based platform that allows **users to book bus seats or private cars**, while enabling **agents to offer their transportation services**.
- Designed intuitive interfaces and smooth booking workflows to enhance user experience.
- Technologies used: **HTML, CSS, JavaScript, Bootstrap, React.js, Laravel**.
- GitHub: <https://github.com/AhmedYahia73/TicketHub>.

- **Sea Go**

- Developed a web platform that enables **tourist villages to interact with users, offer services, and manage village operations** efficiently.
- Designed separate modules for **Users, Admins, Providers (e.g., markets, cafes), and Villages**, each with tailored functionality and access control.
- Villages can access detailed user profiles, track service usage, and manage internal operations.
- Technologies used: **HTML, CSS, JavaScript, Bootstrap, React.js, Laravel**.
